YOGESH KADAM

Chicago, IL (Open to Relocation) | (312) 978-9696 | y.kadam2026@outlook.com | linkedin.com/in/yogi006 | yk-studio.vercel.app

SUMMARY

Full-stack software engineer. I build web apps in React, Next.js, TypeScript and Node.js on PostgreSQL, and right now I ship booking, import and admin features for a live business platform. My own projects push further into the backend: Spring Boot microservices with Kafka, Go services talking over gRPC with Prometheus metrics, and a FastAPI RAG service on pgvector. I use Claude Code and Cursor every day and review what they write before it merges.

EDUCATION

Master of Applied Science, Information Technology and Management | Illinois Institute of Technology, Chicago, IL 05/2026
GPA 4.0/4.0 | Outstanding Student Award, Department of Information Technology and Management

Bachelor of Technology, Computer Science and Engineering | MIT ADT University, Pune, India 10/2023

SKILLS

Languages: TypeScript, JavaScript, Python, Java, Go, SQL, PHP, HTML, CSS
Frontend: React, Next.js, Angular, Redux Toolkit, Zustand, Tailwind CSS, dnd-kit, Leaflet, Figma to code, WCAG 2.1 AA, ARIA, axe-core
Backend and APIs: Node.js, FastAPI, Spring Boot, REST APIs, GraphQL, gRPC, Socket.IO, JWT, RBAC, Zod, microservices, transactional outbox
Data and Messaging: PostgreSQL, MySQL, Supabase, Prisma, GORM, Redis, pgvector, Elasticsearch, Kafka
AI and LLM: Anthropic Claude API, RAG, embeddings, Ollama, Groq, Gemini, LLM fallback and budget controls, Claude Code, Cursor
Cloud and DevOps: AWS (EC2, RDS, S3), Docker, Docker Compose, Kubernetes, nginx, GitHub Actions, Prometheus, Kibana
Testing: Jest, Vitest, React Testing Library, Playwright, MSW, JUnit 5, Mockito, Testcontainers, Cucumber

PROFESSIONAL EXPERIENCE

Junior Full-Stack Developer | Looks For Lease Technologies Inc. 06/2026 – Present
Frontend & Product Engineering Los Angeles, CA (Remote)

- Integrated third-party scheduling and payments into one booking flow, removing a separate post-booking checkout step.
- Added safeguards for duplicate and out-of-order booking events, so a repeated event can't overwrite an active appointment.
- Designed a 4-stage import pipeline (parse, preview, validate, insert) so uploads are reviewed before they reach production data.
- Built a standalone internal admin app on PostgreSQL with CRUD, search, filters and status management.
- Translated Figma designs into React, Next.js and TypeScript across 10+ customer-facing pages during a design-system migration.
- SEO and speed work: metadata, Open Graph, server-rendered routes, code splitting, dynamic imports, image optimization, caching.
- Accessible booking UI with keyboard focus, screen-reader announcements, reduced motion, and clear loading and error states.
- Wrote booking QA checks covering scheduling, availability, payments, notifications and responsive layouts.
- Planned the production handoff (source control, hosting, environment config, access) so deployment ownership is clear.

Web Design & Development Manager | Council of International Programs Chicago 02/2026 – 05/2026
Frontend, Accessibility & CMS Chicago, IL

- Audited 30+ pages across two WordPress sites and tracked every issue by page, priority, owner, fix and status.
- Rebuilt layouts, typography, menus and forms through WordPress theming in HTML, CSS and PHP; restructured site navigation.
- Ran Lighthouse and ARIA audits for accessibility, performance and SEO over 3+ release cycles, re-testing after fixes.

UI/UX Developer | Looks For Lease Technologies Inc. 06/2025 – 08/2025
Frontend Engineering Los Angeles, CA (Remote)

- Built 5+ Next.js admin modules: record management, media handling, approvals, comment threads and pagination.
- Created 10+ reusable Tailwind CSS components that standardized responsive layouts and loading, empty and error states.
- Typed REST APIs with server-side validation across 5+ modules.
- Fixed 15+ defects using Chrome DevTools, Postman and app logs, shipped through agile sprints, Git reviews and CI.

Web Developer | Abhyaz 01/2024 – 07/2024
Frontend Development Chennai, India

- Built 5+ responsive landing pages in HTML, CSS and JavaScript for three marketing campaigns.

PROJECTS

OrbitDesk | Real-time team workspace: Next.js, TypeScript, Prisma, PostgreSQL, Socket.IO, Redis

- Solo build. 46 HTTP handlers over 30 route modules on a 10-model Postgres schema with 4 Prisma migrations.
- Separate Socket.IO service with short-lived JWTs; membership is re-checked from the database on every event, and 3-tier RBAC applies at both API and socket layers.
- Drag-and-drop with dnd-kit and Zustand is optimistic and rolls back from a snapshot if the server rejects a move.
- Auth hardening: bcrypt cost 12, lockout after 5 failed attempts, single-use reset tokens, CSRF origin checks, CSP headers, Redis rate limits.
- Claude API summaries with a 30s timeout, per-user throttling and a deterministic fallback when the model is slow.
- Wrote 283 tests across 51 files with Jest, React Testing Library and Playwright; multi-stage Docker build and a 9-step GitHub Actions pipeline.

BridgeCare | AI health navigation: Next.js, FastAPI, Supabase, pgvector, Python

- Built BridgeCare, an AI health navigation web app in Next.js 16, TypeScript, FastAPI and Supabase, with 14 pages and 14 REST endpoints.
- Urgency comes from a deterministic rules engine with 389 red-flag phrases in 7 languages; the LLM only explains the result.
- Wrote a 4-provider LLM fallback chain (Ollama, Claude, Groq, Gemini) with Claude spend logged in Postgres and cut off at a USD budget.
- Document Q&A over uploaded health records: pypdf, page-bounded chunks, local MiniLM embeddings, pgvector HNSW, answers cited by page.
- Designed 15 Postgres tables with row-level security and 20 policies; the API reads user identity from the token and ignores the body.
- Built a care-options map with Leaflet, OpenStreetMap, Overpass and OSRM routes, plus ARIA live regions and reduced-motion support.

SentinelMesh | Incident management platform: Go, gRPC, Kafka, Elasticsearch, Prometheus, React

- Built SentinelMesh, an incident management platform of 5 Go microservices that turns raw service metrics into alerts and incidents.
- Connected the services over 5 Kafka topics and gRPC; a stream processor indexes every event into Elasticsearch for search in Kibana.
- Wrote the Go SLO engine: availability and error budget for 5 services as Prometheus gauges, with alerts escalated at 2x threshold.
- Repeat alerts attach to the open incident's timeline, so a noisy service can't flood on-call with duplicate incidents.
- Built the React, TypeScript and Redux Toolkit dashboard: live SLO cards on a 5s poll, plus acknowledge and resolve actions.
- Packaged the full stack as 13 Docker Compose containers and wrote Kubernetes manifests with health probes, resource limits and an HPA.

ClaimForge | Insurance claims platform: Java 21, Spring Boot, Kafka, MySQL, Redis, Angular

- Built ClaimForge, an insurance claims platform with 5 Spring Boot microservices, Kafka, MySQL, Redis, and an Angular 22 UI.
- Modeled the claim lifecycle as a 9-state machine in Java, so an illegal transition or a stale update returns 409 Conflict.
- A transactional outbox commits each Kafka event with its MySQL change, and idempotent consumers make redelivery harmless.
- Secured 24 REST endpoints and a GraphQL API with RS256 JWTs, 12 role checks, and a Redis lockout after 5 failed logins.
- Wrote 70 backend tests with JUnit 5, Mockito, Testcontainers, and Cucumber, plus 24 Vitest and 11 Playwright tests.
- Angular 22 UI for 4 roles with signals and lazy routes; axe-core checks 10 screens for WCAG 2.1 AA on desktop and phone.

Ghumakkad | Travel planner: React, TypeScript, Vite, Netlify Functions

- 8,841-line React and TypeScript SPA: 62 components, 15 routes, 13 of them lazy-loaded into 26 Vite chunks.
- Netlify serverless weather proxy with a 10-minute CDN cache, plus a two-tier client cache (in-memory map and 24h localStorage).
- 43 tests (33 Vitest, 10 Playwright) with MSW mocks, 25 Storybook stories and CI on GitHub Actions.

Industry-Student Collaboration Platform | Java, Spring Boot, React, PostgreSQL, AWS

- Spring Boot REST services in Java behind a React frontend, with PostgreSQL for persistence.
- Deployed on AWS (EC2, RDS, S3) and tuned SQL with indexing and query optimization.

TRAINING

AWS Academy Graduate, Cloud Foundations (AWS Training and Certification) | Google Cloud skill badges: DevOps Workflows, Secure Networks, Firebase Serverless Apps, BigQuery Data Warehouse, Eventarc
